RUN ON LINUX

The Sync Agent server and CLI binaries are put in /usr/local/bin/

To run the odrive Sync Agent server in the background

usage: nohup odriveagent > /dev/null 2>&1 &

To just run the odrive Sync Agent server

usage: odriveagent

Use -h with any command to provide information about that command

authenticate

Authenticate odrive with an auth key

usage: odrive authenticate [-h] authKey

positional arguments:

authKey - auth key from https://www.odrive.com/account/authcodes

mount

Mount remote odrive path to the specified local folder

usage: usage: odrive mount [-h] localPath remotePath

positional arguments:

localPath - local path of the desired mount folder

remotePath - remote path for the mount ex: /Google Drive/Pictures or just / for odrive root

ex: odrive mount /my_local_sync_folder /

unmount

Remove a mount

usage: odrive unmount [-h] localPath

positional arguments:

localPath - local path of the mount

ex: odrive unmount /my_local_sync_folder

```
backup
```

(Alpha feature. Can change or be removed at any time)
Backup a local folder to a remote odrive path

usage: odrive backup [-h] localPath remotePath

positional arguments:
localPath - local path of the desired backup folder
remotePath - remote path for the backup ex: /Dropbox/Backup

ex:odrive backup /my_local_backup_folder /Dropbox/Backup

removebackup

(Alpha feature. Can change or be removed at any time) Remove a backup job

usage: usage: odrive removebackup [-h] localPath

positional arguments:

localPath - local path of the backup folder

ex: odrive removebackup /my_local_backup_folder

sync

Sync a placeholder folder or file

usage: odrive sync [-h] placeholderPath [--recursive] [--nodownload]

positional arguments:

placeholderPath - the path to the placeholder file

optional arguments:

- --recursive recursively sync
- --nodownload do not download (used with --recursive)

ex: odrive sync "/my_local_sync_folder/Dropbox.cloudf" --recursive --nodownload

stream

(Alpha feature. Can change or be removed at any time) Stream placholder/remote file

usage: odrive stream [-h] path [--remote]

positional arguments:

path - the path to the placeholder file or a remote path

optional arguments:

--remote - use a remote path instead of a local placeholder path. ex: /Dropbox/movie.mp4

ex: odrive stream /Dropbox/movie.mp4 --remote | vlc -

refresh

Refresh a folder

usage: odrive refresh [-h] folderPath

positional arguments:

folderPath - path of the local folder to refresh

ex: odrive refresh /my_local_sync_folder/Dropbox

unsync

Unsync a file or a folder to turn it back into a placeholder file

usage: odrive unsync [-h] [--force] path

positional arguments:

path - local file or folder to unsync

optional arguments:

--force - force unsync a file or a folder - permanently deleting any local changes or files even if they have not been uploaded yet.

ex: odrive unsync /my_local_sync_folder/Dropbox

xlthreshold

Split files that are larger than this threshold into chunks

usage: odrive xlthreshold [-h] {small, medium, large, xlarge}

positional arguments:

{small,medium,large,xlarge} - choose from small(100MB), medium(500MB), large(1GB), xlarge(2GB)

ex: odrive xlthreshold xlarge

encpassphrase

Specify a passphrase for Encryptor folders

usage: odrive encpassphrase [-h] [--initialize] passphrase id

positional arguments:

passphrase - Encryptor folder passphrase

id - Encryptor ID. (When you first try to sync an Encryptor folder, the id will be given to you)

optional arguments:

--initialize - Initialize a new Encryptor folder passphrase. **Do not use this argument if the passphrase has already been set**

examples:

More information: https://forum.odrive.com/t/odrive-agent-releases-10-04-2018/5175

syncstate

Get sync status info

usage: odrive syncstate [-h] [--textonly] path

positional arguments:

path - file or folder path

optional arguments:

--textonly - display file and folder states with text rather than color

ex: odrive syncstate --textonly /my_local_sync_folder/Dropbox

status

Get a summary of odrive's status

```
usage: odrive status [-h] [--mounts | --backups | --sync_requests | --uploads | --downloads
| --background | --trash | --waiting | --not_allowed]
```

optional arguments:

- --mounts get status on mounts
- --backups get status on backup jobs
- --sync_requests get status on sync requests
- --uploads get status on uploads
- --downloads get status on downloads
- --background get status on background requests
- --trash get status of trash items

- --waiting get status of waiting items
- --not_allowed get status of not allowed items

ex: odrive status

deauthorize

Deauthorize odrive to disassociate the current user and exit

usage: odrive deauthorize [-h]

ex: odrive deauthorize

diagnostics

Generate diagnostics. A local diagnostic file will be created at \$HOME/.odrive-agent/current_odrive_status.txt

usage: odrive diagnostics [-h]

ex: odrive diagnostics

emptytrash

Empty the contents of the odrive trash

usage: odrive emptytrash [-h]

ex: odrive emptytrash

restoretrash

Restore the contents of the odrive trash

usage: odrive restoretrash [-h]

ex: odrive restoretrash

shutdown

Shutdown/exit odrive

usage: odrive shutdown [-h]

ex: odrive shutdown
